

COMPOSITE MAGNETIC PARTICLE

- High sensitivity
- Composite magnetic particle eliminates the need for additional rust inhibitors, defoamers, and dispersants
- Clear, visible defect indication under UV light
- Excellent powder flowability
- Good dispersion stability
- Excellent surface wettability

Code	Description	Package/cans
MPI-CP30	1. suitable for surface and near-surface inspection of magnetizable parts 2. usage: simply mix and dilute the magnetic particle to the recommended concentration (3-7g/L) to form a high performance magnetic suspension	1kg
